

Casualty Care for Teachers

Casualty Care is a 4-5 hour Stop The Bleed type course focused on the Immediate Responders of an incident, that is those that are there before the First Responders. For Teachers and Educators this is becoming a necessity just as CPR and First have been in the past. This course will review all the relevant data from military, law enforcement and civilian shooting events, including current best practices for treatment and transport.

This course will also review some active shooter mitigation, preparedness and response steps that you can take in your school or classroom. This information is based on active shooter events from the past 30 years, as well as recent exercises. Run - Hide - Fight options will be discussed as well as other options for teachers and students.

Topics/Outline

- Review of TCCC/TECC
- Mindset
- Recognize Life Threats
- Tourniquet Use
- Wound Packing
- Chest Seals
- Patient Positioning
